Advances in Delivery Science and Technology mafiadoc com

Abstract Most farmed animals have anatomical and physiological features that are in many ways similar to humans, but there are also important differences. This chapter assumes a basic understanding of mammalian structure and function and attempts to highlight the differences, particularly as they relate to drug delivery and metabolism. There is a conscious bias towards ruminant livestock, as

Investigating the Role of Context in Perceived Stress

The advances in mobile and wearable sensing have led to a myriad of approaches for stress detection in both laboratory and free-living settings. Most of these methods, however, rely on the usage of some combination of physiological signals measured by the sensors to detect stress. While these solutions work great in a lab or a controlled environment, the performance in free-living situations
