In "Towards a Proof-Theoretic Semantics of Equalities," Reinhard Kahle applies proof-theoretic semantics to the treatment of equality by elucidating the difference between extensional and intensional equality in a non-denotational way. Lars Halln s sketches some ideas towards a proof-theoretic foundation for set theory using generalisations of definitional reflection.

### **The s semantics approach Theory and applications**

This paper is a general overview of an approach to the semantics of logic programs whose aim is to find notions of models which really capture the operational semantics, and are, therefore, useful for defining program equivalences and for semantics-based program analysis.
