Algebraic foundations of non commutative differential

The algebraic structure of non-commutative differential geometry is determined by the notion of graded Lie-Cartan pairs, which can be specialized for instance to the so-called matrix differential geometry, and on an abstract level by the Hochschild and cyclic cohomology of the universal differential envelope $n(A)$ of an associative superalgebra A . The spirit of quantum groups is sustained by

Title Quantum Groups Non Commutative Differential

Abstract: The topic of this thesis is the development of a versatile and geometrically motivated differential calculus on non-commutative or quantum spaces, providing powerful but easy-to-use mathematical tools for applications in physics and related sciences.

Noncommutative algebraic geometry Wikipedia

The methods of noncommutative algebraic geometry are analogs of the methods of commutative algebraic geometry, but frequently the foundations are different. Local behavior in commutative algebraic geometry is captured by commutative algebra and especially the study of local rings.
