Ancient Astronomical Observations and the Study of the

This book contains the first detailed study of the use of ancient and medieval astronomical observations in order to investigate the moon s secular acceleration from its discovery by Halley to the establishment of the magnitude of the acceleration by Richard Dunthorne, Tobias Mayer and J r me Lalande in the 1740s and 1750s. Making extensive use of previously unstudied manuscripts, this work shows how different astronomers used the same small body of preserved ancient observations in
