Cardiovascular heart disease mortality in African Americans is the highest of all major racial/ethnic subpopulations in the United States. Examining race and ethnicity, Cardiovascular Disease in Racial and Ethnic Minorities will reveal that there are unacceptable healthcare disparities in risk factor prevalence, disease states, and cardiovascular outcomes in the United States. Written by a team of experts, Cardiovascular Disease in Racial and Ethnic Minorities examines to what degree

### **Cardiovascular Disease in Racial and Ethnic Minorities**

The high burden of cardiovascular disease (CVD) in racial and ethnic minority populations, the unique patterns of illness in these groups, and the growing diversity of the US population warrant a comprehensive examination of CVD epidemiology and outcomes in these populations.

### **Trends in Racial Ethnic Disparities in Cardiovascular**

In the United States, there are persistent racial and ethnic disparities in cardiovascular disease morbidity and mortality. National efforts have focused on reducing these disparities; however, little is known about the long term trends in racial/ethnic disparities in cardiovascular health ( CVH ).

### **ETHNIC DIFFERENCES IN CARDIOVASCULAR DISEASE**

It is difficult to anticipate whether known ethnic differences in cardiovascular disease and diabetes risk, established primarily in middle aged populations, could account for such large ethnic differences in heart failure risk. The impact of, for example, the greater burden of IHD in South Asians on heart failure is difficult to estimate, in part because the ethnic difference in IHD at older

### **Race and ethnicity Clues to your heart disease risk**

Rates of high blood pressure, diabetes, and heart disease vary among people of different backgrounds. Adults living in the United States are more likely to die from heart disease than any other cause, regardless of their racial or ethnic heritage.
