DNA-binding proteins are proteins that have DNA-binding domains and thus have a specific or general affinity for single- or double-stranded DNA. Sequence-specific DNA-binding proteins generally interact with the major groove of B-DNA, because it exposes more functional groups that identify a base pair.

### **Docking Studies on DNA Ligand Interactions Building and**

Despite DNA being an important target for several drugs, most of the docking programs are validated only for proteins and their ligands. In this paper, we used AutoDock 4.0 to perform self-dockings and cross dockings between two DNA ligands (a minor groove binder and an intercalator) and four distinct receptors: 1) crystallographic DNA without

2.2. Basic Concepts and Thermodynamic Relationships. A protein ligand solvent system is a thermodynamic system composed of the solute (i.e., the protein and ligand molecules) and the solvent (i.e., liquid water and buffer ions).

DNA-binding ligand between different host systems. The key process that provides a temporal and spatial control of the formation of a DNA-binder is the photocyclization reaction of styrylpyridine derivative 1, followed by aerobic oxidation to give benzo[c]quinolizinium 2 (Scheme 1). In analogy to the properties of a structurally resembling styrylbenzothiazole 10a we proposed that pyridine

### **Optimizing Scoring Function of Protein Nucleic Acid**

Protein-nucleic acid (protein-DNA and protein-RNA) recognition is fundamental to the regulation of gene expression. Determination of the structures of the protein-nucleic acid recognition and insight into their interactions at molecular level are vital to understanding the regulation function.

### **Investigation of Atomic Level Patterns in Protein Small**

To date protein-protein, protein-DNA, and protein-RNA interactions were systematically investigated, which is in contrast to interactions with small ligands. We investigate the role of covalent and non-covalent bonds in protein-small ligand interactions using a comprehensive dataset of 2,320 complexes.

### **Ligand biochemistry Wikipedia**

In biochemistry and pharmacology, a ligand is a substance that forms a complex with a biomolecule to serve a biological purpose. In protein-ligand binding, the ligand is usually a molecule which produces a signal by binding to a site on a target protein.

### **Systematic domain based aggregation of protein structures**

Abstract. Domains are fundamental subunits of proteins, and while they play major roles in facilitating protein DNA, protein RNA and other protein ligand interactions, a systematic assessment of their various interaction modes is still lacking.
