factorization of matrix and operator functions the state

The present book deals with canonical factorization of matrix and operator functions that appear in state space form or that can be transformed into such a form. A unified geometric approach is used. The main results are all expressed explicitly in terms of matrices or operators, which are parameters of the state space representation. The applications concern different classes of convolution http://bosslens.co/factorization_of_matrix_and_operator_functions_the_state-_.pdf

space factorization method for various types of factorization, including canonical factorization (Chapter 6), minimal factorization (Chapter 9), and factorization of rational matrix functions into a product of elementary ones (see Chapter 10 and also Theorems 2.7 and 8.15). Factorization of the latter type corresponds to cascade synthesis (of systems) involving components of simplest possible http://bosslens.co/Factorization_of_Matrix_and_Operator_Functions-The_State-_.pdf

In all three cases a state space representation of the function to be factored is used, and the factors are expressed in state space form too. We call this approach the state space method. It has a large number of applications. For instance, besides the areas referred to above, Wiener-Hopf factorizations of some classes of symbols can also be treated by the state space method.
