Astrophysics and General Relativity Physics and Astronomy

Observational extragalactic astronomy; Yicheng Guo s research focuses on how galaxies, such as our own Milky Way, were formed and evolved from small, irregular blobs in the early universe into today s massive systems with diverse morphology.

In the twenties the new atomic physics opened the way toward a quantitative interpretation of stellar spectra. It was one of the aims in this new branch of astrophysics to determine in a quantitative way the chemical composition of stellar atmospheres, i. e. of those parts of the stars which are

Astrophysical jet Wikipedia

An astrophysical jet is an astronomical phenomenon where outflows of ionised matter are emitted as an extended beam along the axis of rotation. When this greatly accelerated matter in the beam approaches the speed of light , astrophysical jets become relativistic jets as they show effects from special relativity .

LT found that 1) the scatter in the U B/B V diagram was significantly larger for the interacting than for the noninteracting galaxies and that 2) there was a shift in the distribution of the interacting galaxies towards bluer B V and U B relative to the noninteracting galaxies. Based on spectral evolutionary models, their interpretation was that the major cause of both these

Furthermore, it remains an open question whether G_0 and a_0 are separate constants among individual galaxies and clusters of galaxies. At such large scales, the individual values could possibly vary in a way that maintains a constant universal product $G_0 a_0$.
