Harmony Search Algorithms for Structural Design Optimization

Various structures, such as buildings, bridges, and paved roads play an important role in our lives. However, these construction projects require large expenditures. Designing infrastructure cost-efficiently while satisfying all necessary design constraints is one of the most important and difficult tasks for a structural engineer.

A Hybrid Harmony Search algorithm for discrete sizing

Harmony Search (HS) algorithm is a metaheuristic algorithm that imitates the natural music improvisation process that musicians use to achieve a perfect state of harmony such as that achieved during jazz improvisation. The HS algorithm holds several important advantages over other competing algorithms and has been applied successfully to a wide variety of optimization problems. Key advantages

Adaptive Harmony Search Algorithm for Design Code

Abstract. In this chapter an improved version of harmony search algorithm called an adaptive harmony search algorithm is presented. The harmony memory considering rate and pitch adjusting rate are conceived as the two main parameters of the technique for generating new solution vectors.

The harmony search heuristic algorithm for discrete

The numerical results reveal that the proposed method is a powerful search and design optimization tool for structures with discrete-sized members, and may yield better solutions than those obtained using current methods.
