Both the NATO and Warsaw pact alliances are pursuing permanent space stations in orbit: large structural systems whose development calls for in-situ fabrication and/or assembly and whose operation will demand innovations in controls technology. The last ten years have witnessed a fairly brisk research activity in the dynamics and control of large space structures in order to establish a

Concerning dynamics and control of large flexible space structures, we are, with all three key issues, just in the beginning. The monograph on dynamics and control of large flexible space structures addresses the first two key issues. Its fifteen chapters which are written by structural dynamicists and control "theoreticians" are intended to give the status of this highly interdisciplinary
