Meshfree methods for the solution of partial differential equations gained much attention in recent years, not only in the engineering but also in the mathematics community. One of the reasons for this development is the fact that meshfree discretizations and particle models are often better suited to cope with geometric changes of the domain of interest, e.g. free surfaces and large deformations, than classical discretization techniques such as finite differences, finite elements or finite

Meshfree methods Wikipedia

In the field of numerical analysis, meshfree methods are those that do not require connection between nodes of the simulation domain, i.e. a mesh, but are rather based on interaction of each node with all its neighbors.

Meshless algorithm for partial differential equations on

Radial Basis function (RBF) method for solving partial differential equation (PDE) has a lot of applications in many areas. One of the advantages of RBF method is meshless. The cost of mesh generation can be reduced by playing with scattered data. It can also allow adaptivity to solve some problems with special feature. In this thesis, RBF

Benjamin Seibold Research Meshfree and Particle Methods

Meshfree Finite Difference Methods. Meshfree methods approximate a partial differential equations on an unstructured set of points without any specified connections between points (a point cloud). Meshfree methods exist in form of finite element, finite volume, and finite difference approaches. The former two are commonly defined via basis functions that are constructed by a partition of unity on the point cloud. The latter can be defined by Taylor expansion. In my research, I focus of
