We've learned a lot about optimization in the machine learning community in the past 5-10 years. However, almost all of this has been focused on single objective function optimization problems. We have yet to really understand multiobjective optimization. In this post, I'll first describe the typical optimization setting in machine learning

### **A multiobjective optimization based sparse extreme**

We propose a multiobjective optimization-based sparse extreme learning machine (MO-SELM) for classification and regression tasks. The sparse connecting structure of ELM is designed for learning a more compact network.

### **Pareto Based Multiobjective Machine Learning An Overview**

Abstract: Machine learning is inherently a multiobjective task. Traditionally, however, either only one of the objectives is adopted as the cost function or multiple objectives are aggregated to a scalar cost function.

### **Multi Objective Machine Learning Yaochu Jin Springer**

Recently, increasing interest has been shown in applying the concept of Pareto-optimality to machine learning, particularly inspired by the successful developments in evolutionary multi-objective optimization. It has been shown that the multi-objective approach to machine learning is particularly
