Rule extraction from support vector machines follows the footsteps of the earlier effort to obtain human- comprehensible rules from ANN in order to explain the knowledge learnt by ANN during training. Much attention has been paid during last decades to find effective ways of extracting rules from ANN and very less work has been reported towards representing the knowledge learnt by SVM during

Rule extraction by support vector machine a case study of

SUPPORT VECTOR MACHINES The support vector machine (SVM) proposed by Vapnik (1995) is a novel approach for addressing classification problems. In its simplest linear form, an SVM is a hyperplane that separates a set of positive elements from a set of negative elements with maximum interclass distance, the so-called margin. Figure 1 shows such a hyperplane with the associated margin. 13th IFAC

Rule extraction from support vector machines based on

For rule extraction from SVM, firstly we should choose the type of the learning method and the form of rules. In our work, the proposed technique belongs to the region based methods and therefore the form of the rule is a region defined in the input space.
