Solar Activity The Sun Today with C Alex Young Ph D

Every solar cycle, the number of sunspots, flares, and solar storms increases to a peak, which is known as the solar maximum. Then, after a few years of high activity, the Sun will ramp down to a few years of low activity, known as the solar minimum.

Sun climate moving in opposite directions

It does not seem reasonable to assume that reduced solar activity always equals reduced temperatures on earth. Reduce solar activity, that is still more active then in 1900 should then still result in increasing temperature.
