Graded mapping cone theorem multiseccants and syzygies

Let X be a reduced closed subscheme in \mathbb{P}^n . As a slight generalization of property N_p due to Green Lazarsfeld, one says that X satisfies property $N_{2,p}$ scheme-theoretically if there is an ideal I generating the ideal sheaf $I_X / \mathcal{O}_{\mathbb{P}^n}$ such that I is generated by quadrics and there are only linear syzygies up to p -th step (cf. Eisenbud et al

Discontinuous Current Mode Control for Minimization of

renewable and sustainable energy sources [1]-[3]. In the PV system, H-bridge three-phase grid-tied inverters are generally employed as an interface between solar panels and three-phase grid. In such grid-tied inverters, a grid filter is required to connect between an output of the inverter and the grid in order to filter out the current harmonics and to meet grid current harmonic constraints
