Crystal structure of Middle East respiratory syndrome

Middle East respiratory syndrome coronavirus (MERS-CoV) remains a threat to public health worldwide; however, effective vaccine or drug against CoVs remains unavailable. CoV helicase is one of the three evolutionary most conserved proteins in nidoviruses, thus making it an important target for drug

Crystal structure based exploration of the important role

Human coronavirus OC43 (HCoV-OC43) is a causative agent of the common cold. The nucleocapsid (N) protein, which is a major structural protein of CoVs, binds to the viral RNA genome to form the virion core and results in the formation of the ribonucleoprotein (RNP) complex.

Porcine Reproductive and Respiratory Virus role of viral

The overall aim of our laboratories is to achieve a goal that is seen as a major national priority for the swine industry: the development of a "new generation", effective and safe PRRSV vaccine. Identifying virulence markers and finding rational ways for attenuation of vaccine candidate strains is a top priority. Our laboratories have
