Water Food and Energy UN Water

Water, Food and Energy. The water-food-energy nexus is central to sustainable development. Demand for all three is increasing, driven by a rising global population, rapid urbanization, changing diets and economic growth. Agriculture is the largest consumer of the world's freshwater resources, and more than one-quarter of the energy used globally is expended on food production and supply. The

Water and food security International Decade for Action

Water is key to food security. Crops and livestock need water to grow. Agriculture requires large quantities of water for irrigation and of good quality for various production processes.

http://bosslens.co/Water_and_food_security-International_Decade_for_Action-.pdf

Water Content and Water Activity Two Factors That Affect

Available water can support the growth of bacteria, yeast and mould, which can affect the safety and quality of food. Water activity is a measurement of the availability of water for biological reactions. It determines the ability of micro-organisms to grow. If water activity decreases, micro
